

Frost Proof Meter Frame & Cover

Now from Bingham & Taylor Corporation: a product designed for use in colder climates requiring deeper bury. This iron frame with inner "Frost Pan" creates an insulating air gap between your meter and the surface above, which prevents system freeze-up. Available for use with 18" and 20" meter crocks.

Cast iron lids are available in solid, touch-read, double touch-read, recessed dual purpose, and recessed double dual purpose. H₂O rated plastic lids are also available for use with your AMR metering systems. Bingham & Taylor casts its own products, so customers benefit from exceptional quality control, as well as short lead times and competitive pricing.

| Catalog Part # | Material | Lid Size | Tile Size ID | Lid Weight (lbs) | Complete Weight (lbs) |
|-------------------------------------|-----------|----------|--------------|------------------|-----------------------|
